Interview tips:

• Prepare a short introduction of yourself including your name, location, education, skills and experience. If no experience then include your projects. Make sure intro should not exceed 1 min and It must sound good technically.

• Read about the JD in depth. Read about the company like founders, history, what all services and products they are making and what tech they are using.

- Be confident about everything that you say don't use any bad slangs like aaaah or anything. Frame your words carefully.

- Read all above links as most of the questions are asked.

- Prepare everything that you mentioned in your resume.

- You must be prepared with some questions to ask them if they ask do you have any questions for us. It shows you are more eager to work for them.

- During any interview just show them 3 things, You have good knwolded and learning attitude, You really wanted to work for them and last you are confident. Even if you don't know anything not simply say I don't know it. You can say I studied it long time back but not able to recall but after this interview I will surely brush up that. It shows you are more learning attitude,
